

OUR PACKAGING

Independently from articles, seating are packed individually or by two.

Back and arm rests are protected by soft polyethylene profiles and /or corner pieces, to prevent them from being damaged by knocks or abrasions during handling and transport.

A polyethylene sack is applied to each chair prior to being put in cardboard box. In some cases, where necessary, a sheet of cardboard is placed between one article and another, an extra cardboard layer is placed between the two chairs.

Adequately protected, items are then put into the relative strong cardboard boxes, sealed with adhesive tape, ready for transport.

Each package is provided with a label, the product's image, its characteristics, the head, the addressee, the order's reference number and the number of pieces contained in the box.

TACK GLIDES

Chairs are equipped with tack glides for ceramic flooring, as standard.

On request, tack glides for wooden or carpet flooring can be foreseen.
